Repository: Pending Repository Verification

Status: Pending Repository Verification

Doc ID: SPEC-EVENT-MANAGEMENT

Date: March 2026

1. Proposed Architecture & System Overview

The Event Management System is a proposed full-stack solution designed to streamline the lifecycle of corporate, academic, and cultural events. It encompasses event publishing, attendee ticketing and registration, speaker scheduling, venue capacity allocations, and digital check-ins.

Architectural specifications are defined in anticipation of repository synchronization.

2. Architectural Modules & Specifications

• **Event Catalog & Discovery:** Categorized listings (Tech Conferences, Workshops, Cultural Festivities) with dates and venues.

• **Registration & RSVP Engine:** Attendee ticketing pipeline with automated confirmation emails and QR check-in badges.

• **Organizer Console:** Capacity monitoring, ticket sales tracking, and speaker session time slots.

• **Planned Tech Stack:** React.js frontend, Python Django REST Framework backend, PostgreSQL relational database.

3. Verification & Documentation Status

• **Database Schema:** Tables for Events, Venues, Attendees, TicketTiers, and CheckInLogs are designed and ready for deployment.

• **API Architecture:** Standard REST endpoints mapped for `/api/events/`, `/api/tickets/`, and `/api/registrations/`.

Architecture Note: Repository URL is currently pending upload/verification. Core technical modules and database schemas are defined per architectural blueprints and will be synchronized upon repository release.
